

Usage:	
---------------	--

1. Users open the application and enter their vehicle's license plate.
2. The entered license plate is stored for future use.
3. Users click "Submit" to initiate the Selenium automation process for parking registration on a specific website.
4. Selenium automatically completes the registration process, including logging in, selecting options, and entering the license plate.
5. After successfully registering, it will show the confirmation of the registered vehicles in Aerosoft.
6. Daily notifications serve as reminders for parking registration.
7. The application runs at startup, ensuring you receive daily reminders without needing to manually start the application
